**MICROELECTRONIC TECHNOLOGIES**  
**Electronics and Communications Segment**  
A Teledyne Technologies Company  
12964 Panama St  
Los Angeles, CA 90066-6534

21 February 2005

Subject: Restriction on Hazardous Substances (RoHS)

Teledyne Microelectronic Technologies has implemented actions required to meet the RoHS requirements by the regulatory target date. This effort is being facilitated by our Process Engineering Department and is being supported by Environment, Health and Safety Department. The EU Directive regulatory target date is July 1, 2006 to comply with RoHS. As many of our customers and programs have an exempt status from the requirement, Teledyne Microelectronic Technologies will continue to produce products containing lead-solder to meet our customer's design requirements and needs.

Teledyne has determined that the following RoHS do not exist in our products, nor do any of our suppliers send us products that contain the following:

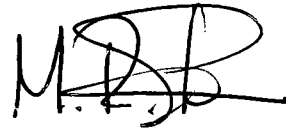

Mercury  
Hexavalent Chromium  
Poly-brominated Biphenyls (PBB)  
Polybrominated Diphenyl Ethers (PBDE)
